

To download an image from Flickr to your computer do the following:
Follow the link to the correct set of photos
Select the photo you like
Above the image will be a "All Sizes" icon. Click it.

Now you will select either the "large" or "Original" Image size
Large is plenty big for saving to a computer, Original is good for larger prints.

Now, select the "Download the Original (or Large) size"

This will be now on your computer. Transfer it to a flashdrive if you want to have copies made commercially!
